Say goodbye to lines and wrinkles . . .

Wrinkle Softening

Frown Line Reduction

By injecting very small amounts of a muscle relaxant into the upper part of the face, furrows and lines can be greatly reduced and even disappear.

Laughing frowning and smiling are expressions we all perform everyday. The majority of us like to express our emotions and feel it is an important part of our character. However, after time these lines resemble a scar, they are noticeable when the face is at rest and are not always a good indicator of how we are feeling i.e. the furrows between our eyebrows make us look cross when we are actually feeling happy. Studies have proved that alleviating these lines and wrinkles can lift the spirit and enhance a feeling of well being.

Dermal Fillers (Restylane®)

Restylane offers the complete solution and treatment choice for men and women seeking to hold back the years and refresh their looks naturally by restoring youthful volume to the skin.

Restylane is a clear gel made of a natural substance called Hyaluronic Acid which is abundant in youthful skin but diminishes as we age.

Whether you require the signs of ageing to be smoothed out, an improvement to your profile, more sensuous lips or skin rejuvenation to your face, chest or hands then Restylane is for you. By replacing Hyaluronic Acid in these areas we are not only smoothing out the lines, folds or wrinkles but also hydrating the skin and promoting a healthier texture.

RESTYLANE is a trademark owned by Q-Med AB

Skin Revitalisation

Skin Rejuvenation with Restylane Vital™

Restylane Vital is a versatile, safe, effective treatment used to rejuvenate the skin in a way that creams and moisturisers simply cannot do. By injecting very small deposits of Hyaluronic acid, Restylane Vital treatment improves the skin quality for a fresher look.

Skin Rejuvenation with Dermaroller™

SAYING goodbye to lines and wrinkles, sun damage, pigmentation, acne scars and stretch marks is easier than ever thanks to an exciting non-surgical skin regeneration procedure. Genuine Dermaroller Therapy uses tiny micro-medical needles on the skin encouraging regeneration and repair, leaving you with smoother, brighter, healthier, younger-looking skin.

Genuine Dermaroller Therapy offers amazing results without the inconvenient 'down time' that comes with more aggressive Laser treatments and medium and deep Chemical Peels. And because it stimulates the skin to regenerate and repair itself without adding foreign substances to the body or taking anything away, Genuine Dermaroller Therapy is a natural process which has an excellent safety profile when used by trained medical aesthetic practitioners. Due to its notable safety profile, Genuine Dermaroller Therapy is suitable for use on darker skins and for use during the summer months when other treatments are more risky due to the increased UV sensitivity they can induce. The treatment is fantastic for the repair of acne scars, for the regeneration of the face, neck, décolleté and the back of the hands and for the treatment of stretch marks on thighs and stomachs.

Excessive Sweating Treatment

This treatment is for you if your daily activities are hampered by the embarrassment of excessive underarm sweating. This condition changes the way you dress and prevents you from being relaxed at social occasions or work. This is a treatment that really does change people's lives and can last approximately 9 months to a year.
